Profit Tools Introduces In-Cab Scanning and Printing with Mobile Office™

In-Cab scan and print capabilities for real-time document transfers between drivers and office staff.

Profit Tools introduces Mobile Office, or MO, a complete turnkey solution that enables drivers and dispatch to send and print documents in real-time. Drivers can scan and send labeled, organized documents to the office from wherever they are. MO saves time and money spent on per page scanning, document delivery, and back-end processing.

MO is comprised of a laptop, flatbed scanner, built-in camera, and printer wired together in a portable, ruggedized case. MO is easy to transport and can stand up to tough conditions on the road. It comes with pre-installed, specialized MO software for easy document transfers.

A simple to use process allows drivers to identify documents they're sending so that office staff receives organized information that can interface directly with Profit Tools or other third party software. Mobile Office seamlessly integrates with Profit Tools Document Imaging and Mobile Direct modules.

"Our customers asked us for an affordable in-cab scan and print solution that would link smoothly with their back-end systems," explained Profit Tools president, Brian K. Widell. "It didn't exist, so we created MO. MO software allows for driver identification of documents and optional administrative review, followed by automatic linking into TMS, imaging, and workflow systems. It's a much-needed tool to speed billing cycles and reduce administrative costs."
