

# **Profit Tools®** **FOR TRUCKING**

*Flexible Software for Flexible Carriers*

## **Profit Tools Holds First User Conference**

*Profit Tools hosted its first user conference this spring at main headquarters.*

March 2009- Profit Tools held its first User Conference on March 10th and 11th at their main office in Lee, New Hampshire. The two day course covered best practices for using Profit Tools software and demos of new features and functionality. The conference was offered to support and upgrade (SUS) package subscribers at a significant discount off the cost of regular onsite training.

The first day consisted of lessons on new features and functionality that were added to the software in the past year. Customers were also shown best practices in some of the software's modules including order entry, itineraries, routing, and dynamic screens. The second day of training included open discussions and individual analysis of PT best practices based on the types of moves of each attendee's operation.

"In our commitment to become the most responsive software company in the industry, we are proud to hold our first user conference," said John Howes, Account Manager. "We want to insure the conference has a one on one type of environment and we will schedule more user conferences, perhaps on a regional basis, if the demand is high."
