

Profit Tools® **FOR TRUCKING**

Flexible Software for Flexible Carriers

Solutions Offered by Profit Tools and Trimble Mobile Resource Management change the face of dispatch centers

Profit Tools recently teamed up with [Trimble Mobile Resource Management](#) for a solutions seminar in Port Elizabeth, N.J. The Solutions Seminar showed customers how Profit Tools and Trimble work together to make dispatching and tracking a more efficient process.

Trimble, formerly known as @Road, provides end-to-end mobile resource management solutions, including real time mobile messaging systems and GPS locators which integrate with Profit Tools software. The integration with Profit Tools dispatch solution reduces the time spent on logging arrivals and departures and assigning jobs. With the use of in-cab messaging equipment drivers are able to log their own arrivals and departures directly into the Profit Tools system, saving time for themselves and the dispatch centers by virtually eliminating phone time.

"The pairing of Profit Tools software with Trimble's mobile resources has changed the dynamics of dispatching," said Brian Walker of Profit Tools. "Now that dispatch centers are operating more efficiently there is more time for planning and less time spent on the phone."
