

# EDI WORKFLOW PROCESS OUTLINE

## PROFIT TOOLS EDI DIRECT™ CARRIER DATA AUTOMATION SOLUTION

### Set-up: Saves 5+ minutes per load

Load tenders (orders) are sent directly from your customer's system to your Profit Tools system, saving order entry time and ensuring all information is accurate.

### Execution: Saves 5+ minutes per load

Perform dispatch in automated system. As stops are completed the system will send a Status Update. This can be triggered by dispatcher entry or mobile comm update from driver in the field. This information updates your customer's system, and enables them to provide status tracking to *their* customer and other third parties who need it - the shipper, consignee, etc. (Note: With Profit Tools, you can also provide status tracking direct to these third parties through email notifications, web tracing, etc.)

### Billing & Payment: Saves 5+ minutes per load

Faster and with less collections/matching hassles than with conventional invoicing.

Using Profit Tools EDI Direct™, all data and document transfers are via internet FTP (file transfer protocol) eliminating third-party (VAN) transaction charges.
